

EuroClonality workshop

Clonality assessment in Pathology

March 3-5 2027 Nijmegen, The Netherlands

Introduction

Clonality testing is an established tool in the diagnosis of malignant lymphomas. Between 5-15% of samples submitted to pathology laboratories which are suspected to be malignant lymphomas can benefit from clonality testing. With the introduction of the IG/TR clonality assays by the BIOMED-2 group in 2003, a major step in standardization and quality improvement was set. NGS-based clonality analysis offers even more in-depth analysis, which increases the diagnostic possibilities. Many laboratories throughout the world introduced clonality assessment in their diagnostic routine, resulting in questions on pitfalls in technique and the interpretation of the results.

EuroClonality/BIOMED-2 workshops

The EuroClonality/BIOMED-2 consortium in 2006 decided to organize annual workshops for laboratories that have introduced clonality testing using the EuroClonality/BIOMED-2 primers and protocols for the evaluation of the clonality data in routine practice. Since the vision of EuroClonality is that clonality testing can only be performed reliably when there is close interaction between the clinical molecular biologist and the hematopathologist and/or immunologists (of flow cytometry expert), these workshops are organized for such partners.

About

Central in the workshop are the discussions of cases that the participants bring themselves. The cases are discussed from the different professional views (morphology, molecular and clinical context), resulting in interprofessional learning. The cases are used on a hands-on basis; using microscopic views for pathology evaluation and clonality results for interpretation. The workshops are for a restricted number of persons. We invite persons to the workshop:

- who use the EuroClonality/BIOMED-2 primers and protocols or the EuroClonality NGS-based clonality protocol
- who are able to bring cases for evaluation during the workshop
- who participate as combination of pathology (or flow cytometry) and molecular biology: only a combination of two persons per institute will be accepted for the workshop.

With this background, we are convinced that the workshops are a fruitful experience that will lead to improved diagnosis of malignant lymphomas.

Registration

The registration form, including personal details and descriptions of the cases to be submitted, must be received by the Workshop Secretariat workshop@euroclonality.org no later than **November 6, 2026**. Without submitted case descriptions via the registration form, your registration cannot be accepted. Registrants will be informed about their provisional acceptance for the workshop before **November 24, 2026**.

The registration fee for participation in the workshop is €415, which should be paid after provisional acceptance and receipt of an invoice (which will be sent via email). Participants will be accepted only when the registration fee has been received by Radboudumc before **January 19, 2027**. Participants will be informed about their final acceptance no later than **January 22, 2027**.

Workshop Faculty
pathologie@radboudumc.nl

Dr. Patricia Groenen
Clinical molecular biologist
workshop coordinator
Radboudumc, Nijmegen, NL

Prof. dr. Falko Fend
Hematopathologist
University of Tübingen, DE

Prof. dr. Ton Langerak
Medical immunologist
Erasmus MC, Rotterdam, NL
